TARIFF FORMAT

- A. **Sheet Numbering** - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, occasionally, when a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. **Sheet Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th revised Sheet 14 cancels the 3rd Revised Sheet 14. Because of various suspension periods, deferrals, etc. the Commission follows in their tariff approval process, the most current sheet number on file with the Commission is not always the page in effect. Consult the Check Sheet for the sheet currently in effect.
- C. **Paragraph Numbering Sequence** - There are four levels of paragraph coding. Each level of code is subservient to its next higher level:
- 2.
 - 2.1.
 - 2.1.1.
 - 2.1.1.1.
- D. **Check Sheets** - When a tariff filing is made with the Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some pages). The Tariff user should refer to the latest Check Sheet to find if a particular sheet is the most current on file with the Commission.

SECTION 3 - DESCRIPTION OF SERVICE

3.1. TIMING OF CALLS

- 3.1.1. The subscriber's long distance usage charge is based on the actual usage of Company's service. Usage begins when the receiver of the called number is answered. The moment of the called party's answer is determined by hardware supervision in which the local telephone company sends a signal to the underlying carrier's switch or the software utilizing audio tone detection. The timing of the call occurs when called party answers and terminated when either party hangs up.
- 3.1.2. Unless otherwise specified in this tariff, the minimum call duration for billing purposes is eighteen (18) seconds with six (6) second billing increments thereafter.
- 3.1.3. Any portion of an applicable increment, after the appropriate minimum time for the call, will be rounded upward to the next increment. Calls less than the minimum length will be rounded to the minimum length.
- 3.1.4. There is no billing for incomplete calls.

3.2. CALCULATION OF DISTANCE

Usage charges for all mileage sensitive products are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call. The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produce by Bell Communications Research in the V & H Coordinates Tape and appear in National Exchange Carriers Association Tariff No.4.
