PRICE LIST FORMAT

Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the price list. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.

Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd revised Page 14. Because of various suspension periods, deferrals, etc. the Commission follows in their price list approval process, the most current page number on file with the Commission is not always the price list page in effect. Consult the Check Sheet for the page currently in effect.

Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.
- 2.1.1.A.1.(a).I.(i).
- 2.1.1.A.1.(a).I.(i).(1).

Check Sheets - When a price list filing is made with the Commission, an updated check sheet accompanies the price list filing. The check sheet lists the pages contained in the price list, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk(*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The price list user should refer to the latest check sheet to find out if a particular page is the most current.

SECTION 3 - SERVICE DESCRIPTIONS AND RATES, (CONT'D.)**SECTION 3.0 - DESCRIPTION OF SERVICE AND RATES, (Cont'd.)****3.2 Calculation of Distance**

Usage charges for any mileage sensitive services are based on the airline distance between the rate center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the applicable rate centers as defined by BellCore (Bell Communications Research), in the following manner:

Step 1 - Obtain the "V" and "H" coordinates for the rate center of the originating and the destination points.

Step 2 - Obtain the difference between the "V" coordinates of each of the rate centers. Obtain the difference between the "H" coordinates.

Step 3 - Square the differences obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating rate centers of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

SECTION 3 - SERVICE DESCRIPTIONS AND RATES, (CONT'D.)

3.3 Timing of Calls

Billing for calls placed over the network is based in part on the duration of the call.

3.3.1 For Direct Dialed and Operator Station calls, chargeable time begins when the called party answers the call (i.e. when two way communications are established.) Answer detection is based on standard industry answer detection methods, including hardware and software answer detection. For Person-to-Person calls, chargeable time begins when the designated party comes on the line, or when the caller agrees to speak with a substitute party. (T)
(N)
|
(N)

3.3.2 Chargeable time for all calls ends when one of the parties disconnects from the call. If the called party hangs up but the calling party does not, chargeable time ends when the network connection is released by automatic timing equipment (or, in some instances, when the calling party initiates another call without hanging up).

3.3.3 Minimum call duration for billing purposes is thirty (30) seconds unless otherwise specified in the individual rate schedules of this tariff. Any partial thirty second increment is rounded up to a full increment.

3.3.4 Calls are measured and billed in six (6) second increments unless otherwise specified in the individual rate schedules of this tariff. Any partial six second increment is rounded up to a full increment.

3.3.5 Dancris will not knowingly bill for incomplete calls.

3.4 Time-Of-Day Rate Periods

None of Dancris' offerings are presently time-of-day sensitive. The Company does not provide for holiday discounts.

SECTION 3 - SERVICE DESCRIPTIONS AND RATES, (CONT'D.)**3.5 Switched Outbound Service**

3.10 Public Telephone Surcharge

In order to recover the Company's expenses to comply with the FCC's pay telephone compensation plan effective on October 7, 1997 (FCC 97-371), an undiscountable per call charge is applicable to all interstate, intrastate, and international calls that originate from any domestic pay telephone used to access Dancris services. This surcharge, which is in addition to standard tariffed usage charges and any applicable service charges and surcharges associated with Dancris service, applies for the use of the instrument used to access Dancris service and is unrelated to the Dancris service accessed from the pay telephone.

Pay telephones include coin-operated and coinless phones owned by local telephone companies, independent companies and other interexchange carriers. The Public Pay Telephone Surcharge applies to the initial completed call and any reoriginated call (e.g., using the "#" symbol). The Public Pay Telephone Surcharge does not apply to calls placed from pay telephones at which the Customer pays for service by inserting coins during the progress of the call.

Whenever possible, the Public Pay Telephone Surcharge will appear on the same invoice containing the usage charges for the surcharged call. In cases where proper pay telephone coding digits are not transmitted to the Company prior to completion of a call, the Public Pay Telephone Surcharge may be billed on a subsequent invoice after the Company has obtained information from a carrier that the originating station is an eligible pay telephone.
