PRICE LIST FORMAT

A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the IPUC. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Consult the Check Sheet for the sheet currently in effect.

C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.
- 2.1.1.A.1.(a).I.(i).
- 2.1.1.A.1.(a).I.(i).(1).

D. Check Sheets - When a price list filing is made with the IPUC, an updated Check Sheet accompanies the price list filing. The Check Sheet lists the sheets contained in the price list, with a cross reference to the current revision number. When new sheets are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some sheets.)

SECTION 3 - DESCRIPTION OF SERVICE (CON'T.)

3.2 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

Step 1 - Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.

Step 2 - Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the Difference between the "H" coordinates.

Step 3 - Square the differences obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

SECTION 3 - DESCRIPTION OF SERVICE (CON'T.)

3.3 Timing of Calls

Billing for calls placed over the network is based in part on the duration of the call.

3.3.1 Long distance usage charges are based on usage of FTC's service. Usage timing begins upon receipt of answer supervision from the called party at the distant end. Call duration timing will commence from that point.

3.3.2 Chargeable time for a call ends upon disconnection by either party.

3.3.3 In calculating the total time for a particular call, any fraction of the last increment of use, is rounded up to the next higher increment.

3.3.4 Minimum call durations, usage measurements and rounding increments are specified on a per-product basis in Section 4 of this tariff.

3.3.5 No charges apply for incomplete calls. If a Customer believes he or she has been incorrectly billed for an incomplete call, the Company will, upon notification, investigate the circumstances of the call and issue a credit when appropriate.
