- 2.1 Check Sheets: When a tariff filing is made with the IPUC, an updated Check Sheet accompanies the filing. The check sheet lists the sheets contained in the filing with the cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision.
- 2.2 Numbering: Sheet numbers appear in the upper left corner of each page. Sheets are numbered sequentially. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 6 and 7 would be 6.1.
- 2.2.1 Sheet revising numbers also appear in the upper left corner of each page. These numbers are used to determine the most current sheet version on file with the IPUC. For example, the 4th revised sheet 6 cancels the 3rd revised sheet 6. Consult the check sheet for the sheet currently in effect.
- 2.3 Paragraph Number Sequence - There could be several levels of paragraph coding. Each level of coding is subservient to its next higher level.
- 2.
  - 2.1
  - 2.1.1
  - 2.1.1.1

### 3. Service Area

- 3.1 USP will be servicing the entire State of Idaho.

Issued: April 4, 1992

4. **Deposit Requirement** " No Deposit Required "
5. **Termination of Service** USP Communications will follow the rules pursuant to section IDAPA 31.D.3.
6. **Service Offering**
- 6.1 Calculation of Distance
- 6.1.1 Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call.
- 6.1.2 The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. USP Communication uses vertical and horizontal coordinated produced by Bell Communications Research in their NPA-NXX V&H coordinated tape in Bell's NECA Tariff No. 4.
- 6.1.2.1 Formula:
- $$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$
- 6.2 USP Communications Minimum Call Completion: Customers can expect a call completion rate of not less than 90% during peak periods for Feature Group A (FGA) services. The call completion is calculated as the number of calls completed, including calls completed to a busy or unanswered line, divided by the number of calls attempted.
