PRICE LIST FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the Price List. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.
- B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised page 14 cancels the 3rd revised page 14.
- C. Paragraph Numbering Sequence - There are six levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2.
 - 2.1
 - 2.1.1
 - 2.1.1 (A)
 - 2.1.1 (A).1
 - 2.1.1 (A).1.a
- D. Check Sheets - When a Price List filing is made with the Commission, an updated check sheet accompanies the Price List filing. The check sheet lists the pages contained in the Price List, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision.

A Customer can expect a call completion rate (number of calls completed/number of calls attempted) of not less than 98% during peak use periods.

2.16 Timing of Calls

Calls are timed by the switch used to route the Customer's long distance traffic. Chargeable time begins when connection is established between the calling station and the called station. Chargeable time ends when the calling station "hangs up". If the called station "hangs up" but the calling station does not, chargeable time ends when the connection is released by the automatic timing equipment. Answer supervision is utilized where available. When answer supervision is not available from the LEC end office, software answer supervision is utilized.

SECTION 2 - RULES AND REGULATIONS

2.18 Mileage Measurements

Each rate center or POP has a unique set of assigned vertical and horizontal (V&H) coordinates which are used by the DUC for calculating mileage. Calculation of mileage is in accordance with the V&H coordinate system.

The distance is measured using the V&H coordinates associated with either the rate centers of the originating and terminating stations or the V&H coordinates associated with the originating and terminating POP of the DUC. The type of access determines which V&H coordinates are used.

If a call is originated or terminated via switched access, the distance is measured using the V&H coordinates associated with the rate centers of the originating or terminating station.

The rate for a call between access lines associated with stations that use the same central office is the rate for zero miles.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal (V&H) coordinates associated with the rate centers involved.

FORMULA:

$$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

SECTION 2 - RULES AND REGULATIONS

2.19 Determining Rate In Effect

2.19.1 General

For outbound Service(s) that are time-of-day sensitive, the time-of-day at the central office or POP associated with the calling station determines the rate in effect. For inbound Service(s) that are time-of-day sensitive, the time-of-day at the central office or POP associated with the called station determines the rate in effect. Time of day shall be determined in accordance with Paragraph 2.17.

2.19.2 Calls Originating Via Switched Access

When a unit of time is split between two rate periods, each rate period applies to the portion of the call that occurred during that rate period.

2.20 Application of Charges

Usage charges apply to all completed calls. The usage charges for each completed call during a billing month will be computed. If the charge includes a fraction of a cent \$0.005 and greater, the fraction is rounded up to the next higher whole cent. Otherwise, the charge is rounded down to the next lower whole cent.
