SECTION 3 - DESCRIPTION OF SERVICE & RATES, (CONT'D.)**3.2 Calculation of Distance**

Usage charges for mileage sensitive services vary based on the type of service subscribed to by the Customer. For services utilizing switched access, mileage measurements for rate schedules are based on the distance in airline miles between rate centers associated with the originating and terminating stations. For services utilizing dedicated access, mileage measurements for rate schedules are based on the distance in airline miles between the Xtracom network access point associated with the station utilizing Dedicated Access Origination/Termination and the rate center associated with the called/calling station.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1: Obtain the "V" and "H" coordinates for the serving wire center or network access point serving the Customer's location and the called/calling station.
- Step 2: Obtain the difference between the "V" coordinates. Obtain the difference between the "H" coordinates.
- Step 3: Square the differences obtained in Step 2.
- Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating locations of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

SECTION 3 - DESCRIPTION OF SERVICE & RATES, (CONT'D.)

- 3.3.1 Long distance usage charges are based on the actual usage of the Company's network. Chargeable time begins when the calling and the called station are connected.
- 3.3.2 Chargeable time ends when the calling service point terminates, thereby releasing the network connection. If the called party hangs up but the calling number does not, chargeable time ends when the network connection is released by signal from the called party location or by automatic timing equipment in the telephone network.
- 3.3.3 Unless otherwise specified in this tariff, the minimum call duration for billing purposes is eighteen (18) seconds.
- 3.3.4 Unless otherwise specified in this tariff, usage is measured and rounded in six (6) second increments for billing purposes.
