

NUMBERING FACTS

- Idaho currently has one area code (208)
- Idaho Public Utilities Commission (IPUC) has been advised that the anticipated exhaust date for Idaho's single 208 area code is forecasted to be on or about second quarter 2010.
- IPUC will need to begin its 36-month planning within the coming months.
- Idaho was previously forecast to exhaust its area code in 2001, however number conservation efforts were able to delay that date.
- The Idaho PUC has applied to the FCC for delegated authority that may also help forestall the current forecasted exhaust date and the commission is currently waiting for the FCC to decide on Idaho's application.
